## 2. System sizing

### Warning

The system in which the CM Booster is incorporated must be designed for the maximum pump pressure.

### Caution

The default setting will cause the pump not to stop until it reaches its maximum pressure.

## 3. Mechanical installation

### Warning

Before starting any work on the CM Booster, make sure that the power supply has been switched off and that it cannot be accidentally switched on.

## 4. Electrical connection

The electrical connection should be carried out by an authorized electrician in accordance with local regulations.

### **Warning**

*Check that the supply voltage and frequency match the voltage and frequency on the nameplate.*

### **Warning**

*Before making any connections in the unit, make sure that the power supply has been switched off and that it cannot be accidentally switched on.*

*The unit must be connected to an external mains switch with a contact gap of at least 3 mm in all poles.*

*As a precaution, the unit must be connected to a socket with earth connection.*

*We recommend to fit the permanent installation with an earth leakage circuit breaker (ELCB) with a tripping current < 30 mA.*

## 5. Start-up

*Do not start the pump until it has been filled with liquid.*

## 6. Alarms

*If a dry-running alarm has been activated, find the cause before the pump is restarted in order to prevent damage to the pump.*

### 6.1 Anti-cycling

*In case of a very small consumption, the anti-cycling function may detect this as cycling and stop the pump inadvertently. If this occurs, the function can be disabled.*

#### Disabling the function

To disable the function, set DIP switch 7 to "OFF". See Quick Guide.

### 6.2 Auto reset

*Set auto reset to "on" only if there is positive inlet pressure.*

## 7. Fault finding chart

**Warning**

*Before starting work on the pump, make sure that the power supply to the pump has been switched off and that it cannot be accidentally switched on.*

Fault	Cause	Remedy
1. The green light field for "0 bar" is off even if the power supply has been switched on.	a) The fuses in the electric installation have burnt. b) The earth leakage circuit breaker or the voltage-operated circuit breaker has tripped out. c) No power supply. d) The PM unit is defective.	Replace the fuses. If the new fuses also burn, check the electric installation. Cut in the circuit breaker. Contact the power supply authorities. Repair or replace the PM unit.
2. The green "Pump on" indicator light is on, but the pump does not start.	a) The power supply to the pump is disconnected after the PM unit. b) The motor protection of the pump has tripped out due to overload. c) The pump is defective. d) The PM unit is defective.	Check the plug and cable connections, and check if the built-in circuit breaker of the pump is switched off. Check if the motor/pump is blocked. Repair or replace the pump. Repair or replace the PM unit.
3. The pump does not start when water is consumed. The "Pump on" indicator light is off.	a) Too big difference in height between the PM unit and the tapping point. b) The PM unit is defective.	Adjust the installation, or increase the start pressure. See quick guide. Repair or replace the PM unit.
4. <b>System without pressure tank:</b> Frequent starts/stops.	a) DIP switch 5 set to "ON". b) Leakage in the pipework. c) The non-return valve is stuck in open position.	Set DIP switch 5 to "OFF". See quick guide. Check and repair the pipework. Clean or replace the non-return valve.
5. <b>System with pressure tank:</b> Frequent starts/stops.	a) The pressure tank has no precharge pressure, or the tank size is insufficient. b) Leaky non-return valve.	Check the tank precharge pressure, and recharge the tank, if necessary. If the size of the pressure tank is insufficient, set DIP switch 5 to "OFF", or replace the pressure tank. Clean or replace the non-return valve.
6. The pump does not stop.	a) The pump cannot deliver the necessary discharge pressure. b) The start pressure is set too high. c) The PM unit is defective. d) The non-return valve is stuck in open position.	Replace the pump. Decrease the start pressure. Repair or replace the PM unit. Clean or replace the non-return valve.

Fault	Cause	Remedy
7. The red "Alarm" indicator light is permanently on.	a) Dry running. The pump needs water.  b) The power supply to the pump is disconnected after the PM unit.  c) The motor protection of the pump has tripped out due to overload.  d) The pump is defective.  e) The PM unit is defective.	Check the pipework.  Check the plug and cable connections, and check if the built-in circuit breaker of the pump is switched off.  Check if the motor/pump is blocked.  Repair or replace the pump.  Repair or replace the PM unit.
8. System without pressure tank:  The red "Alarm" indicator light flashes once per period.	a) Cycling. A tap has not been closed entirely after use.  b) Cycling. There is a minor leakage in the system.	Check that all taps have been closed.  Check the system for leakages.
9. System with pressure tank:  The red "Alarm" indicator light flashes once per period.	a) Cycling. The pressure tank has no precharge pressure, or the tank size is insufficient.	Check the tank precharge pressure, and recharge the tank, if necessary. If the size of the pressure tank is insufficient, set DIP switch 5 to "OFF", or replace the pressure tank.  See quick guide.
10. The red "Alarm" indicator light flashes twice per period.	a) Maximum continuous operating time (30 minutes). The pump has been running continuously for 30 minutes.	Check the system for leakages. Disable the function to allow the pump to run for 30 minutes.  See quick guide.
11. The red "Alarm" indicator light flashes three times per period, and each pump start is delayed a few seconds.	a) Too many start/stop sequences within a short period. The pressure tank has no precharge pressure, or the tank size is insufficient.  b) Too many start/stop sequences within a short period. The PM 2 is set to start/stop with 1 bar differential pressure, i.e. DIP switch 5 is set to "ON", but no pressure tank has been installed in the system.	Check the tank precharge pressure, and recharge the tank, if necessary. If the size of the pressure tank is insufficient, set DIP switch 5 to "OFF", or replace the pressure tank.  Set DIP switch 5 to "OFF".
12. The red "Alarm" indicator light flashes four times per period.	a) Pressure sensor fault.	Repair or replace the PM unit.

## 8. Disposal

This product or parts of it must be disposed of in an environmentally sound way:

1. Use the public or private waste collection service.
2. If this is not possible, contact the nearest Grundfos company or service workshop.
